

PRODUCT DATA SHEET

ZincomondTM Nickel Chloride

ZincomondTM Nickel Chloride, together with Zincomond Nickel Sulfate, are high quality products widely used by high quality plating facilities.

ZincomondTM Nickel Chloride is a constituent of nickel plating solutions where it ensures the efficient dissolution of nonactivated nickel anode materials. It can also be used in the eletrorefining and electrowinning of nickel, and the salts are intermediates in the manufacture of certain nickel chemicals and catalysts.

ZincomondTM Nickel Chloride is made under automated process control to ensure the highest and most consistent quality to meet the needs of electroplating, and other applications.

Certification: ISO 9001:2008 、 ISO 14001:2004 、 OHSAS 18001:2007

Chemical Composition : typical weight percent

NiCl ₂ ·6H ₂ O						
Ni+Co	Co	Cu	Fe	Pb	Zn	Na
24 (Min)	<0.005	<0.001	<0.001	<0.0005	<0.0001	<0.01

Appearance: Green Crystals

Uses: Nickel Plating. Reagent Chemicals. Production of other Nickel Chemicals.

Packing: 25kg per plastic bag
40 bags per wooden pallet, with plastic stretch wrap
